# ABSTRACT

Regardless of the language in which the dissertation is written, usually there are at least two abstracts: one abstract in the same language as the main text, and another abstract in some other language.

The abstracts' order varies with the school. If your school has specific regulations concerning the abstracts' order, the NOVAthesis L<sup>A</sup>T<sub>E</sub>X (`novathesis`) (L<sup>A</sup>T<sub>E</sub>X) template will respect them. Otherwise, the default rule in the `novathesis` template is to have in first place the abstract in *the same language as main text*, and then the abstract in *the other language*. For example, if the dissertation is written in Portuguese, the abstracts' order will be first Portuguese and then English, followed by the main text in Portuguese. If the dissertation is written in English, the abstracts' order will be first English and then Portuguese, followed by the main text in English. However, this order can be customized by adding one of the following to the file `5_packages.tex`.

```
\ntsetup{abstractorder={<LANG_1>, . . . , <LANG_N>}}  
\ntsetup{abstractorder={<MAIN_LANG>={<LANG_1>, . . . , <LANG_N>}}}
```

For example, for a main document written in German with abstracts written in German, English and Italian (by this order) use:

```
\ntsetup{abstractorder={de={de, en, it}}}
```

Concerning its contents, the abstracts should not exceed one page and may answer the following questions (it is essential to adapt to the usual practices of your scientific area):

1. What is the problem?
2. Why is this problem interesting/challenging?
3. What is the proposed approach/solution/contribution?
4. What results (implications/consequences) from the solution?

**Keywords:** One keyword, Another keyword, Yet another keyword, One keyword more, The last keyword

## RESUMO

Independentemente da língua em que a dissertação está escrita, geralmente esta contém pelo menos dois resumos: um resumo na mesma língua do texto principal e outro resumo numa outra língua.

A ordem dos resumos varia de acordo com a escola. Se a sua escola tiver regulamentos específicos sobre a ordem dos resumos, o template (L<sup>A</sup>T<sub>E</sub>X) `novathesis` irá respeitá-los. Caso contrário, a regra padrão no template `novathesis` é ter em primeiro lugar o resumo *no mesmo idioma do texto principal* e depois o resumo *no outro idioma*. Por exemplo, se a dissertação for escrita em português, a ordem dos resumos será primeiro o português e depois o inglês, seguido do texto principal em português. Se a dissertação for escrita em inglês, a ordem dos resumos será primeiro em inglês e depois em português, seguida do texto principal em inglês. No entanto, esse pedido pode ser personalizado adicionando um dos seguintes ao arquivo `5_packages.tex`.

```
\abstractorder(<MAIN_LANG>) := {<LANG_1>, . . . , <LANG_N>}
```

Por exemplo, para um documento escrito em Alemão com resumos em Alemão, Inglês e Italiano (por esta ordem), pode usar-se:

```
\ntsetup{abstractorder={de={de,en,it}}}
```

Relativamente ao seu conteúdo, os resumos não devem ultrapassar uma página e frequentemente tentam responder às seguintes questões (é imprescindível a adaptação às práticas habituais da sua área científica):

1. Qual é o problema?
2. Porque é que é um problema interessante/desafiante?
3. Qual é a proposta de abordagem/solução?
4. Quais são as consequências/resultados da solução proposta?

**Palavras-chave:** Primeira palavra-chave, Outra palavra-chave, Mais uma palavra-chave, A última palavra-chave

## INTRODUCTION

This is the `novathesis`  $\LaTeX$  template Version 7.1.18 from `Template!date2024-01-16`.

*This work is licensed under the  [\$\LaTeX\$  Project Public License v1.3c](#). To view a copy of this license, visit the [LaTeX project public license](#).*

## 1.1 Welcome to the novathesis Template

This first Chapter introduces the `novathesis` template and how it is organized. In Chapter 2 you can find some specific instructions on how to use this template. Chapter 3 shows some examples and give some hints on how to write your text. Please read these next Chapters carefully.

### 1.1.1 Your Time is Precious

Did you learn how to drive by sitting by the wheel and throwing your car into the road? Most probably you did take your time *learning the rules* and *practicing* first! Likewise, it is not wise to throw yourself at the task of writing a thesis/dissertation in  $\LaTeX$  without seriously considering the following recommendation!

If you are going to spend zillions of hours writing your thesis/dissertation using the `novathesis`  $\LaTeX$  template (or some other  $\LaTeX$  template), be wise and spend a couple of hours learning how to use it properly by reading its manual. And then, be even wiser, and spend a few more hours [learning some  \$\LaTeX\$](#) . I am sure that the time you are investing now will pay itself countless times before you submit your thesis/dissertation.

— João Lourenço

### 1.1.2 Recognition

The `novathesis` template was born in 1996, and what you see now accumulates to many many hundreds (thousands?!) of working hours, unpaid and stolen from family and friends. This work is available to the community under the  [\$\LaTeX\$  Project Public License v1.3c](#), which means you are entitled to use it for free and change it at your will. However, if you decide to use this template to write your thesis/dissertation, **be fair to the developers** and:

1. Cite the `novathesis` manual [10] in a place of your choice (e.g., in the *Acknowledgments*) of your thesis/dissertation with “`\cite{novathesis-manual}`”. If you cite it this way, the correct entry will be added automatically to your bibliography (no need to worry with the necessary BibTeX entry, as it will be added automatically);
2. Go to the [project web page in GitHub](#) and give the project a star (marked with a red ellipse at the top-right in Figure 1.1); and
3. Make a donation by visiting the `novathesis` project page and clicking in the button marked with a green ellipse at the top-center in Figure 1.1). Alternatively, just click [HERE](#) and your browser will be directed to the right page.

## 1.2 The *NOVAt*thesis Template

The `novathesis` template was born at the Department of Computer Science (DI) of NOVA School of Science and Technology (FCT) of NOVA University Lisbon (NOVA), Portugal. But the user base grew. . . initially grew to other Departments of FCT-NOVA, then to other Schools of NOVA, and later to other Schools of other Universities. Currently more than 25 Schools are natively supported by the `novathesis` template (see Tables 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6).

## 1.3 Getting Started

The template provides an *easy to use* setting for you to write your thesis/dissertation in  $\text{\LaTeX}$ :

- Select your school;
- Fill your thesis metadata (title, research field, etc) in the file “`template.tex`”;
- Create your thesis/dissertation contents using the files in folder “`Chapters`”; and
- Process using you favorite  $\text{\LaTeX}$  processor (`pdf $\text{\LaTeX}$` , `X $\text{\LaTeX}$`  or `Lua $\text{\LaTeX}$` ).

### 1.3.1 Using Overleaf

**Overleaf** is a collaborative cloud-based  $\text{\LaTeX}$  editor used for writing, editing and publishing scientific documents. Like “*Goggle Docs*”, for  $\text{\LaTeX}$  users”). You can edit and compile your  $\text{\LaTeX}$  source on the cloud, without installing software in your own computer, and, much like *Google Docs*, you can share your document with others users and everybody can edit the same file at the same time (this may be dangerous).

If you do not have an account in **Overleaf**, you must **create one first**.

Once you have an account, please access the **novathesis** template in **Overleaf** and select the green button *Open as Template* (see **Figure 1.2**).

*Please notice that the version currently available in Overleaf (v6.10.10) is slightly outdated (current version is v7.1.18). A new version (v7.0.0) will be submitted to Overleaf soon. Until then, please:*

1. Download the *latest version* from the *GitHub repository* as a *Zip file*.

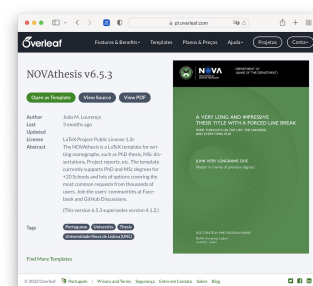

Figure 1.2: NOVathesis template in Overleaf.

2. Login to your favorite LaTeX cloud service. I recommend *Overleaf* but there are alternatives (these instructions apply to Overleaf and you'll have to adapt for other providers).
3. In the menu select: *New project* → *Upload project*.
4. Upload the zip file.
5. Select “*template.tex*” as the main file.
6. Let Overleaf compile the document.

### 1.3.2 Using a Local LaTeX Installation Local

First of all, start by installing LaTeX in your computer. There are two main distributions, *MikTeX* and *TeXLive*, and both of them are available for the 3 most popular Operating Systems: Linux, macOS and Windows.

Be aware that a full installation of *MikTeX* or *TeXLive* will take near 5 GB of hard disk space. So, think twice before installing the full distribution. See the *novathesis* Wiki for the [list of packages required to compile the template](#).

Once you have LaTeX up and running, remember to install a good LaTeX text editor. I recommend you to take a look at [this post](#) in the [tex.stackexchange.com](#) site. If you want a quick and dirty recommendation, try *TeXStudio*.

Now, you must access the *novathesis* repository in *GitHub*, select the green button *Code* and then *download* (or *clone*) the template. You will always get the latest version of the template (currently v7.1.18 from 2024-01-16).

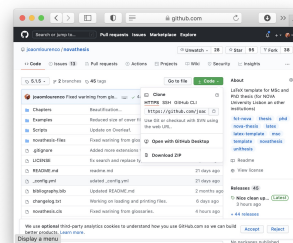

Figure 1.3: The *NOVathesis* Project page in *GitHub*.

## 1.4 Getting Help

No! You don't have to use this template to write your thesis. You don't even have to use LaTeX. However, writing a thesis is serious stuff, and which tool you shall use to write it is not a decision to make lighthearted.

LaTeX is hard enough by itself. This template aims at making your life easier, but not easy. If you choose to use this template to write your thesis, you are very welcome. However, don't expect me to provide you help with LaTeX. Look for help with your friends (you have some friends, don't you?), or search the web, or try even to read some book(s) on LaTeX. In the end you will certainly find the experience rewarding.

When you come to the point of “*How do I do this with the novathesis template?*”, remember. . .

1. To check the *novathesis* [wiki](#) and have some hope! :D
2. [Google](#) is your best friend.

3. Search the [GitHub Discussions page](#) for a question related to yours. *If and only if* you don't find one, then post your own question in English please!
4. Search the [NOVAtheis Facebook group](#) for a question related to yours. *If and only if* you don't find one, then post your own question in either Portuguese or English, at your preference.

When you post your own question, remember to **always** state the **novathesis** version number you are using and referring to.

**Please do not attempt to contact me directly (email, Messenger, etc)...  
I WILL NOT REPLY!**

### 1.4.1 Suggestions, Bugs and Feature Requests

**Help:** If you just need some help, see above [Section 1.4](#).

**Suggestion:** Do you have a suggestion/recommendation? Please add it to the wiki and help other users!

**Bug:** Did you find a bug? Please open an issue. Thanks!

**New Feature:** Would you like to request a new feature (or support of a new School)? Please open an issue. Thanks!

## 1.5 Donors

The [list of Donnors](#) is available in the **novathesis** Project page.

## 1.6 Disclaimer

Although the **novathesis** template is endorsed by some Schools (e.g., [linked from FCT-NOVA web site](#)), the **novathesis** template **this not an official template** for any School.

The **novathesis** template exists to make your life easier and we do our best to make it compliant to the supported (+25) Schools' regulations but, in the end of the line, you and only you are accountable for both the look and the contents of the document you submit as your thesis/dissertation.

# NOVATHESIS TEMPLATE *USER'S MANUAL*

This manual is outdated and must be revised!

## 2.1 Introduction

This Chapter describes how to use the NOVAtHesis L<sup>A</sup>T<sub>E</sub>X (`novathesis`) template. It is assumed that you have a working of L<sup>A</sup>T<sub>E</sub>X, either local (in your own computer) or remote (in [Overleaf](#)), and that you were able to generate a PDF for the default configuration of the template: a PhD thesis for NOVA School of Science and Technology (FCT).

## 2.2 Quick Start

### 2.2.1 With a Local L<sup>A</sup>T<sub>E</sub>X Installation

Follow these steps to get started with a local L<sup>A</sup>T<sub>E</sub>X installation:

1. Download L<sup>A</sup>T<sub>E</sub>X. There are two major L<sup>A</sup>T<sub>E</sub>X distributions — [MikT<sub>E</sub>X](#) and [T<sub>E</sub>XLive](#) — that share lots of similarity, and L<sup>A</sup>T<sub>E</sub>X documents are portable between them. This means that, for most users, both systems are equally usable.

**T<sub>E</sub>X-Live** is maintained by (La)T<sub>E</sub>X developers and is certainly the best distribution you may install in your computer: However, the default distribution will take more than 5 GB on your hard disk. . . so, if you are not short on disk space, install T<sub>E</sub>XLive!

**MikT<sub>E</sub>X** will, by default, install only a minimal set of packages. The extra/additional packages will be installed on the fly. Installing packages on the fly is useful if disk space is limited, but has its own caveats in the longer term. Definitely choose MikT<sub>E</sub>X if you're short on disk space.

Which one to download? There are [pros and cons for both distributions](#) so it is essentially a question of where does your heart falls first! Mine falls to T<sub>E</sub>XLive, but yours can fall elsewhere! :D

2. Install  $\text{\LaTeX}$ . Installation of  $\text{\LaTeX}$  is as hard as installing any other software. Just do your best and you will certainly succeed.
3. Update your  $\text{\LaTeX}$  installation using the *TeXLiveUtility* program of the MikTeX console.
4. Download the `novathesis` template by either:

- Cloning the [GitHub repository](#) with

```
git clone --depth=1 https://github.com/joaomlourengo/novathesis.git
```

or

- Downloading the [latest version from the GitHub repository](#) as a Zip file.

5. Download additional School specific files if applicable:

**Universidade do Minho (UMINHO)** download the required *NewsGotT* font files from <https://github.com/joaomlourengo/novathesis-extras/raw/main/Fonts/NewsGotT.zip>

then unzip the file and copy the 3 font files

```
"n015002t.ttf", "n015003t.ttf", and "n015006t.ttf"
```

to the folder

```
"NOVAthesisFiles/FontStyles/Fonts".
```

**Escola Superior de Enfermagem do Porto (ESEP)** download the required *Calibri* font files from <https://github.com/joaomlourengo/novathesis-extras/raw/main/Fonts/Calibri.zip>

then unzip the file and copy the 4 font files

```
"Calibri.ttf", "Calibrib.ttf", "Calibrii.ttf", and "Calibriz.ttf"
```

to the folder

```
NOVAthesisFiles/FontStyles/Fonts.
```

6. Compile the document with you favorite LaTeX processor (pdfLaTeX, XeLaTeX or LuaLaTeX).
  - The main file is named `"template.tex"`, but you are free to rename it as you please.
  - Either load the main file in your favorite [LaTeX text editor](#) and press the appropriate (*magic*) button to generate a PDF file, or open a terminal and compile it with `"latexmk -pdf template"`. If you use a  $\text{\LaTeX}$  text editor, please notice that the `novathesis` template uses `"biber"` and not `"bibtex"` to process the bibliography, which means that most probably you have to open

the *Editor Preferences* and somewhere (depending on the Editor you are using) change “`bibtex`” to “`biber`”.

- Notice that, due to the external font sets used, pdf $\LaTeX$  will not work for both **UMINHO** and **ESEP**, and you have to use either X $\LaTeX$  (“`latexmk -pdfxe template`”) or Lua $\LaTeX$  (“`latexmk -pdflua template`”).

7. Edit the files in the “Config” folder:

File	Contents
<code>0_memoir.tex</code>	Options specific for the memoir package. <i>Don't touch this file unless you know what you are doing!</i>
<code>1_novathesis.tex</code>	Configure the template (e.g., the document type, the school, the languages used, etc.)
<code>2_biblatex.tex</code>	Select how your citations and bibliographic references will be printed. The default is numbers inside square brackets, e.g. [10], but you can change it to other formats, such as author-year, e.g., Lourenço (2021).
<code>3_cover.tex</code>	Configure cover contents (e.g., thesis/dissertation title, author's name, advisers' names, committee members' names, date, etc).
<code>4_files.tex</code>	Select the files for chapters, appendices, annexes, abstracts, glossaries, etc.
<code>5_packages.tex</code>	User's customization. Load additional packages and define your own commands to be used throughout the document.
<code>6_list_of.tex</code>	Configure the lists to be printed (table of contents, list of figures, list of tables, list of listings, etc). <i>Don't touch this file unless you know what you are doing!</i>
<code>9_nova_fct.tex</code>	Configuration specific to NOVA-FCT. Otherwise ignored.
<code>9_nova_ims.tex</code>	Configuration specific to NOVA-IMS. Otherwise ignored.
<code>9_nova_itqb.tex</code>	Configuration specific to NOVA-ITQB. Otherwise ignored.
<code>9_ulisboa_fmv.tex</code>	Configuration specific to ULISBOA-FMV. Otherwise ignored.
<code>9_uminho.tex</code>	Configuration specific to UMINHO (all Schools). Otherwise ignored.

8. Recompile de document.

9. And you're done with a beautifully formatted thesis/dissertation! :D

## 2.2.2 With a Remote Cloud-based Service

Follow these steps to get started with a remote  $\LaTeX$  installation:

- Download the [latest version from the GitHub repository](#) as a Zip file.

- Login to your favorite LaTeX cloud service. I recommend [Overleaf](#) but there are alternatives. These instructions apply to Overleaf and you'll have to adapt for other providers.
- In the menu select `New project` → `Upload project`.
- Select “`template.tex`” as the main file.
- Follow from Step 5 above in Section 2.2.1 ([With a Local LaTeX Installation](#)).

## 2.3 Folder and Files

The `novathesis` template is organized into many files and folders. At the main level it includes the following files and folders listed in Table 2.1.

Table 2.1: The folders and files.

Name	Type	Access	Contents
<code>novathesis.cls</code>	<i>file</i>		The main class file.
<code>template.tex</code>	<i>file</i>		The main template file. You need to <i>compile</i> this file with one of <code>pdfLaTeX</code> , <code>X<sub>Y</sub>LaTeX</code> , or <code>LuaLaTeX</code> to obtain the PDF file (“ <code>template.pdf</code> ”).
<code>template.pdf</code>	<i>file</i>		A possible result of applying <code>pdfLaTeX</code> to the “ <code>template.tex</code> ” file. The look and feel of the document will depend on the parametrization/configuration (e.g., <code>School</code> ) of this template.
Chapters	<i>folder</i>		Examples of document contents, including Chapters, Appendices, Annexes, Abstracts, Glossaries, Lists of Symbols, etc. Replace them with your own.
Bibliography	<i>folder</i>		Where all your bibliography files should be located. You may have as many as you want, as long as you add them to the template with “ <code>\ntaddfile{bib}{FILENAME.bib}!</code> ”.
NOVathesisFiles	<i>folder</i>		Additional files for the <code>novathesis</code> template. This is where all the juice is so, unless you are a TeXmagician, don't mess up with the files and folders inside this folder.

## 2.4 The novathesis.cls Class Options

The `novathesis` class (`novathesis.cls`) can be customized with the options listed below.

<p><b>doctype=OPT</b>  <i>phd, phdprop, phdplan, msc, mscplan, bsc, plain</i></p>	<p><b>The type of the document.</b>  <i>phd</i> → PhD thesis (<i>≡ default</i>).  <i>phdprop</i> → PhD thesis proposal (for FCT-NOVA).  <i>phdplan</i> → PhD thesis plan.  <i>msc</i> → MSc dissertation.  <i>mscplan</i> → MSc dissertation plan.  <i>bsc</i> → BSc report.  <i>plain</i> → Other report.</p>
<p><b>school=OPT</b>  <i>nova/fct, nova/fcsh, nova/ims, nova/ensp, nova/itqb, ulisboa/ist, ulisboa/fc, ulisboa/fmv, uminho/ea, uminho/ec, uminho/ed, uminho/ee, uminho/eeg, uminho/em, uminho/ep, uminho/ese, uminho/ics, uminho/ie, uminho/elach, uminho/i3b, ips/ests, ipl/isel, ulht/deisi, other/esep</i></p>	<p><b>Selection of the university and of the school.</b>  <i>⇒ Default: nova/fct</i>  This option changes the typesetting of the de document to some specific School formatting and layout, like covers, margins, fonts, paragraph spacing and indentation, etc.</p>
<p><b>docstatus=OPT</b>  <i>draft, provisional, final</i></p>	<p><b>The current status of the document.</b>  <i>draft</i> → Working version (<i>≡ default</i>).  <i>provisional</i> → Version for submission.  <i>final</i> → Final version.</p>
<p><b>lang=OPT</b>  <i>en, pt, de, es, fr, gr, it</i></p>	<p><b>The main language for the document.</b>  <i>en</i> → English (<i>≡ default</i>).  <i>pt</i> → Portuguese.  <i>de</i> → German.  <i>es</i> → Spanish.  <i>fr</i> → French.  <i>gr</i> → Greek.  <i>it</i> → Italian.</p>
<p><b>abstractorder=OPT</b>  <i>{L<sub>1</sub>, L<sub>2</sub>, . . . , L<sub>n</sub>}</i>  <i>{DL={L<sub>1</sub>, L<sub>2</sub>, . . . , L<sub>n</sub>}</i></p>	<p><b>Forces the abstracts languages and order.</b>  <i>DL</i> → Document language (<i>≡ defaults to the main language</i>).  <i>L<sub>i</sub></i> → A two-letters language code.</p>
<p><b>lang/extra=OPT</b>  <i>{L<sub>1</sub>, L<sub>2</sub>, . . . , L<sub>n</sub>}</i></p>	<p><b>Additional languages used in the document.</b>  <i>⇒ Default: {}</i>  Besides the main language and those used in the abstracts.  <i>L<sub>i</sub></i> → A two-letters language code.</p>

<p><b>linkscolor=OPT</b> <i>A color of your choice.</i></p>	<p><b>The color for all the hyperlinks in the PDF file.</b> ⇒ <i>Default: darkblue</i> The “media=paper” option (see below) will override this option to “black”</p>
<p><b>media=OPT</b> <i>screen, paper</i></p>	<p><b>The target of the PDF.</b> ⇒ <i>Default: screen</i> By default, PDF for screen has colored links and identical left and right margins, while PDF for paper (to print) has black links and may have different left and right margins.</p>
<p><b>print/index=OPT</b> <i>true, false</i></p>	<p><b>Produce the document index.</b> ⇒ <i>Default: false</i> The index (<i>indice remissivo</i>) is a keyword index typeset an the end of the document. WARNING: Should not be confused with the table of contents.</p>
<p><b>fontstyle=OPT</b> <i>bookman, charter, fourier, kpfonts(*), mathpazo1, mathpazo2, newcent</i></p>	<p><b>The font set to be used in the document.</b> Please note that a font set include definitions for the main text, headings, maths, etc.</p>
<p><b>chapstyle=OPT</b> <i>bianchi, bluebox, brotherton, dash, default, elegant(*), ell, ger, hansen, ist, jenor, lyhne, madsen, pedersen, veelo, vz14, vz34, vz43</i></p>	<p><b>The chapter style</b> The look of the chapter beginning.</p>
<p><b>converlang=OPT</b> <i>en, pt(*)</i></p>	<p><b>The language to be used when typesetting the cover page.</b></p>
<p><b>otherlistsat=OPT</b> <i>front(*), back</i></p>	<p><b>Where to put the other lists besides the table of contents.</b> The default is (<i>front</i>) before the main text. But some scientific areas prefer them at the end of the document (<i>back</i>), just before the Appendixes.</p>
<p><b>statement=OPT</b> <i>true, false(*)</i></p>	<p><b>Include or don't include the contents of the “statement” file.</b> The default is for this file to be ignored (if it exists).</p>
<p><b>spine=OPT</b> <i>true, false(*)</i></p>	<p><b>Generate the book spine and the last page in the PDF.</b></p>

**biblatex=OPT***OPT={list of options for biblatex}***Customize biblatex, the bibliography management system used in this class.**

Probably you will want to change the value of the biblatex “style” option. For other customizations of biblatex check its manual.

---

**memoir=OPT***OPT={list of options for memoir}***Customize the base class memoir.**

The memoir manual should be the first document to be consulted when looking for “**how can I do this?**” You may want to change the base font size from 11pt to a smaller (10pt) or larger (12pt) size. Also, remember to change the “draft” to final when your document is finished.

---

---

## 2.5 Additional considerations about the class options

In this section we will provide some additional considerations about some of the customizations available as class options.

### 2.5.1 The main language

The choice of the main language with the option “lang=OPT” affects:

- **The order of the summaries.** First is printed the abstract in the main language and then in the foreign language. This means that if your main language for the document is English, you will see first the “abstract” (in English) and then the “resumo” (in Portuguese). If you switch the main language for the document for Portuguese, it will also automatically switch the order of the summaries to “resumo” and then “abstract”.
- **The names for document sectioning.** E.g., “Chapter” vs. “Capítulo”, “Table of Contents” vs. “Índice”, “Figure” vs. “Figura”, etc.
- **The type of documents in the bibliography.** E.g., “Technical Report” vs. “Relatório Técnico”, “PhD Thesis” vs. “Tese de Doutorado”, etc.

No matter which language you chose, you will always have the appropriate hyphenation rules according to the language at that point. You always get Portuguese hyphenation rules in the “Resumo”, English hyphenation rules in the “Abstract”, and then the main language hyphenation rules for the rest of the document.

### 2.5.2 Class of Text

You must choose the class of text for the document. The available options are:

1. **bsc** — BSc graduation report.
2. **\*mscplan** — Preparation of MSc dissertation. This is a preliminary report graduate students at DI-FCT-NOVA must prepare to conclude the first semester of the two-semester MSc work. The files specified by `\ntdedicatoryfile` and `\acknowledgmentsfile` are ignored, even if present, for this class of document.
3. **msc** — MSc dissertation.
4. **phdprop** — Proposal for a PhD work. The files specified by `\ntdedicatoryfile` and `\acknowledgmentsfile` are ignored, even if present, for this class of document.
5. **prepphd** — Preparation of a PhD thesis. This is a preliminary report PhD students at DI-FCT-NOVA must prepare before the end of the third semester of PhD work. The files specified by `\ntdedicatoryfile` and `\acknowledgmentsfile` are ignored, even if present, for this class of document.
6. **phd** — PhD dissertation.

### 2.5.3 Printing

You must choose how your document will be printed. The available options are:

1. **oneside** — Single side page printing.
2. **\*twoside** — Double sided page printing.

### 2.5.4 Font Size

You must select the encoding for your text. The available options are:

1. **11pt** — Eleven (11) points font size.
2. **\*12pt** — Twelve (12) points font size. You should really stick to 12pt. . .

### 2.5.5 Text Encoding

You must choose the font size for your document. The available options are:

1. **latin1** — Use Latin-1 ([ISO 8859-1](#)) encoding. Most probably you should use this option if you use Windows;
2. **utf8** — Use [UTF8](#) encoding. Most probably you should use this option if you are not using Windows.

## 2.5.6 Examples

Let's have a look at a couple of examples:

- Preparation of PhD thesis, in portuguese, with 11pt size and to be printed single sided (I wonder why one would do this!)  
`\documentclass[prephd,pt,11pt,oneside,latin1]{thesisdifact-nova}`
- MSc dissertation, in English, with 12pt size and to be printed double sided  
`\documentclass[msc,en,12pt,twoside,utf8]{thesisdifact-nova}`

## 2.6 How to Write Using L<sup>A</sup>T<sub>E</sub>X

Please have a look at Chapter 3, where you may find many examples of L<sup>A</sup>T<sub>E</sub>X constructs, such as Sectioning, inserting Figures and Tables, writing Equations, Theorems and algorithms, exhibit code listings, etc.

## 2.7 Example glossary, acronyms, and symbols

This is the first occurrence of an abbreviation: abbreviation of a longer text (abbrev). And now the second occurrence of the same abbreviation: abbrev. And a new acronym with capital letter: And extension of a xpto (xpto) and reused xpto. Let's also use a few other acronyms such as acronym aaa (aaa), acronym aab (aab), acronym aba (aba), acronym bbb (bbb) and xpto. In geometry, the area enclosed by a circle of radius  $r$  is  $\pi r^2$ . Here the Greek letter  $\pi$  is equal to the ratio of the circumference of any circle to its diameter. Lets add "computer" to the glossary! Be carefull with mathematical symbols in acronyms, please see the definition of  $\mu$ .

# A SHORT L<sup>A</sup>T<sub>E</sub>X TUTORIAL WITH EXAMPLES

This Chapter aims at exemplifying how to do common stuff with L<sup>A</sup>T<sub>E</sub>X. We also show some stuff which is not that common! ;)

Please, use these examples as a starting point, but you should always consider using the *Big Oracle* (aka, [Google](#), your best friend) to search for additional information or al-ternative ways for achieving similar results.

## 3.1 Document Structure

## 3.2 Dealing with Bibliography

Citing something online [4, 6, 8].

## 3.3 Inserting Tables

## 3.4 Importing Images

## 3.5 Floats, Figures and Captions

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetur id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Vestibulum pellentesque felis eu massa.

## 3.6 Text Formatting

## 3.7 Generating PDFs from $\LaTeX$

### 3.7.1 Generating PDFs with `pdflatex`

You may create PDF files either by using `latex` to generate a DVI file, and then use one of the many DVI-2-PDF converters, such as `dvipdfm`.

Alternatively, you may use `pdflatex`, which will immediately generate a PDF with no intermediate DVI or PS files. In some systems, such as Apple, PDF is already the default format for  $\LaTeX$ . I strongly recommend you to use this approach, unless you have a very good argument to go for `latex + dvipdfm`.

A typical pass for a document with figures, cross-references and a bibliography would be:

```
$ pdflatex template
$ bibtex template
$ pdflatex template
$ pdflatex template
```

You will notice that there is a new PDF file in the working directory called `template.pdf`. Simple :)

Please note that, to be sure all table of contents, cross-references and bibliographic citations are up-to-date, you must run `latex` once, then `bibtex`, and then `latex` twice.

### 3.7.2 Dealing with Images

You may process the same source files with both `latex` or `pdflatex`. But, if your text include images, you must be careful. `latex` and `pdflatex` accept images in different (exclusive) formats. For `latex` you may use EPS or PS figures. For `pdflatex` you may use JPG, PNG or PDF figures. I strongly recommend you to use PDF figures in vectorial format (do not use bitmap images unless you have no other choice).

### 3.7.3 Creating Source Files Compatible with both `latex` and `pdflatex`

Do not include the extension of the file in the `\includegraphics` command. E.g., use

```
\includegraphics{sonwman}
```

and not

```
\includegraphics{sonwman.eps}.
```

If you use the first form, `latex` or `pdflatex` will add an appropriate file extension.

This means that, if you plan to use only `pdflatex`, you need only to keep (preferably) a PDF version of all the images. If you plan to use also `latex`, then you also need an EPS version of each image.

## To be included in the sections above

Para fazer citações, deverá usar-se a chave da referência no ficheiro BibTeX. Se for uma única referência [2], usar um “~” para ligar o `\cite{...}` à palavra que o precede (... referência~\cite{Artho04}). Caso queira fazer múltiplas citações [12, 13, 11], deverá agrupá-las dentro de um único `\cite{...}`.

Note que o ficheiro de bibliografia pode ter tantas entradas quantas quiser. Apenas aquelas cuja chave seja referenciada no texto é que serão incluídas na listagem de bibliografia.

Footnotes<sup>1</sup> will be numbered and shown in the bottom of the page.

A Tabela 3.1 ilustra alguns conceitos importantes associados à construção de tabelas:

- i) Não usar linhas verticais;
- ii) A legenda deve ficar por cima da tabela;
- iii) Usar as macros `\toprule`, `\midrule` e `\bottomrule` para fazer a linha horizontal superior, interiores e inferior, respectivamente.

Table 3.1: Test results summary.

Test	Anomalies	Warnings	Correct	Categories	Missed
Connection [3]	2	2	1	C	1
Coordinates'03 [1]	1	4	1	2B, 1C	0
Local Variable [1]	1	2	1	A	0
NASA [1]	1	1	1	—	0
Coordinates'04 [2]	1	4	1	3C	0
Buffer [2]	0	7	0	2A, 1B, 2C, 2D	0
Double-Check [2]	0	2	0	1A, 1B	0
StringBuffer [7]	1	0	0	—	1
Account [14]	1	1	1	—	0
Jigsaw [14]	1	2	1	C	0
Over-reporting [14]	0	2	0	1A, 1C	0
Under-reporting [14]	1	1	1	—	0
Allocate Vector [9]	1	2	1	C	0
Knight Moves [3]	1	3	1	2B	0
<b>Total</b>	<b>12</b>	<b>33</b>	<b>10</b>	<b>5A, 6B, 10C, 2D</b>	<b>2</b>

As figuras a inserir no documento deverão ser de qualidade, preferencialmente em formato vectorial (PDF vectorial) e não em *bitmap* (PNG, JPG, etc). As imagens *bitmap* (Figura 3.2) não escalam bem e têm reflexos negativos na qualidade do seu documento. Pelo contrário, as imagens *vectoriais* Figura 3.3 escalam muito tanto quanto o necessário sem degradar a qualidade da imagem.

<sup>1</sup>This is a simple footnote.

Só deve usar *screenshots* se não tive mesmo nenhuma alternativa. Em vez e gerar um *screenshot*, tente usar uma impressora virtual PDF e imprimir para um ficheiro PDF. Regra geral obterá um PDF vetorial. Mesmo que o seu PDF contenha imagens, elas terão sempre qualidade maior ou igual à que obteria com um *screenshot*.

Para agregar várias figuras numa única. . . Poderá assim referenciar o conjunto como Figura 3.4 ou as sub-figuras separadamente como 3.4() e 3.4(a).

### 3.8 Equações

O LaTeX é uma ferramenta poderosa para escrever em estilo matemático. Permite inserir fórmulas no meio do texto como por exemplo esta:  $ax^2 + bx + c = 0$ . Também permite que as fórmulas sejam destacadas numa linha separada e centradas na página

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

ou numeradas

$$aaa \tag{3.1}$$

que depois pode ser referida no texto como sendo a equação 3.1

$aa$

$$a \tag{3.2}$$

$$b \tag{3.3}$$

$$c \tag{3.4}$$

$$\tag{3.5}$$

### 3.9 Test for algorithms

Uncomment the algorithms source below and add the following to file “5\_packages.tex”

```
\usepackage{algorithm2e}
```

```
\RestyleAlgo{ruled}
```

and uncomment

```
\ntaddlistof{listofalgorithms}
```

in file “8\_list\_og.tex”.

Figure 3.2: Imagem em formato *bitmap* (JPG)

Figure 3.3: Imagem em formato PDF vectorial

(a) Novelo de lã

(b) Tempestade com neve

Figure 3.4: Exemplo de utilização de *subbottom*

## *NOVATHESIS* COVERS SHOWCASE

This Appendix shows examples of covers for some of the supported Schools. When the Schools have very similar covers (e.g., all the schools from Universidade do Minho), just one cover is shown. If the covers for MSc dissertations and PhD thesis are considerable different (e.g., for FCT-NOVA and UMinho), then both are shown.

## APPENDIX 2 LOREM IPSUM

This is a test with citing something [5] in the appendix.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetur id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas.
